

## **SafeMobile Has Successfully Deployed its Automatic Vehicle Location System at Burgas Airport, Bulgaria**

**CHICAGO, IL – April 1, 2008** – American International Radio, Inc.’s SafeMobile Division announced today the successful deployment of a GPS TETRA system for Burgas Airport in Bulgaria. Burgas Airport, a regular member of Airports Council International – European Region, was rated “Bulgaria’s Best Airport” in 2004 and received the award of the Ministry of Transport for the most dynamically developing airport in Bulgaria.

SafeMobile delivers unique, highly scalable and customized mobile asset management systems that go beyond the utilization of Global Positioning System (GPS) and Automatic Vehicle Location (AVL) technologies to greatly enhance safety and efficiency. The SafeMobile system was designed to satisfy the specific tracking requirements of Burgas Airport. Burgas Airport sought an Automatic Vehicle Location System for 20 (twenty) TETRA mobile terminals to be used by the airport personnel and on the vehicles that operate within the airport facility.

The SafeMobile technology provided to Burgas Airport in Bulgaria consists of an AVL application using the TetraFlex TETRA infrastructure to display, monitor and track the vehicles operating within the airport facility. The SafeMobile solution was optimized to work integrated with Motorola MTM800 and MTH800 radios. With SafeMobile’s software application, SafeDispatch, the dispatcher is now capable of receiving messages (location, speed, direction) from the Motorola radios that are being used by the airport personnel. SafeDispatch is the client-server application that provides customers with the ability to effectively manage and monitor their mobile assets and offers features and capabilities that make people and vehicle tracking an easy and pleasant experience. Burgas Airport can now benefit of the many features offered through the SafeDispatch application such as: real-time tracking, geo-fencing, alarms, excessive speed alerts, landmarking and reporting.

### **About SafeMobile, Inc**

SafeMobile provides mobile assets management systems and discrete data applications for critical environments around the world. SafeMobile delivers unique, highly scalable and customized mobile asset management systems that go beyond the utilization of Global Positioning System (GPS) and Automatic Vehicle Location (AVL) technologies to greatly enhance fleet safety and operating efficiency.
